

Cloud Connectivity Device

CL-20

Seamlessly transfer data from many third party consoles to TAP

Easily collect and organize your data

Universal data transfer to Topcon Agriculture Platform (TAP)

Designed to interface with many in-cab consoles across the agriculture industry, the CL-20 cloud connectivity device provides streamlined data transfer to the Topcon Agriculture Platform (TAP). TAP is our farm management ecosystem which provides universal organization and visualization for actionable insights across the crop cycle.

On-board cellular connectivity removes need for external internet source

Utilizing a USB connection for simple setup, plus integrated cellular connectivity for convenience and efficiency, the CL-20 does not require an additional internet source to transfer data. Tied to TAP, you can easily manage mixed data in a single platform.

Proven, leading hardware

TAP Topcon Agriculture Platform

Organize. Visualize. Prescribe.

The modern path to precision starts with data organization. TAP not only ingests data from virtually any source, its drag-and-drop interface with automated field-linking makes the process efficient and painless. Establish geo-boundaries, push in your data, and it does the rest.

TAP offers industry-leading high-resolution visualizations. What does this mean to you? Regardless of data type (e.g. yield, soil, fertility, imagery, topography), the platform enables a clear perspective for better agronomic decisions. Easily establish zones and create prescription maps for optimized application.

Compatible Products

3rd party in-cab console
