

Machine Link

Horizon Software Feature

Boost efficiency by synchronizing tasks across machines in real-time.

Collaborative task management made easy

Related Features

TAP Pro

Automate the data workflow, with streamlined connection and fleet management.

XTEND

Extend the Horizon User Interface to virtually any modern iOS or Android mobile device.

Compatible Consoles

- XD
- X25
- XD+
- X35

Supported Application

- Soil Preparation
- Crop Care
- Seeding
- Harvest

Machine Link enables collaborative management of in-field tasks, working with proven, easy-to-use Horizon in-cab field software.

Topcon Horizon software brings Machine Link, a connectivity feature allowing multiple machines to collaborate in-field by sharing live coverage and application data.

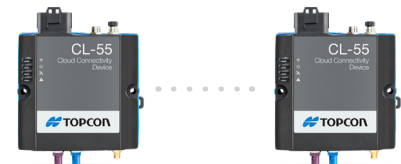

Task data is seamlessly connected across machines so all operators can view overall progress to work more effectively and avoid duplicate effort.

Horizon software Machine Link provides a scalable and clean approach to managing multiple machines in the same field on the same task.

How it Works

Dedicated wireless network between machines via CL-55(s).*

*ASC-10, CL-55 devices and "Machine Link" feature unlock required.

Data shared via machine relay (aka Multi-hop), providing extended range (up to 15km).

Uses Horizon Auto Section Control to collaborate, sharing local and remote coverage in real-time.
