# Plot Planter

Horizon Software Feature

Upgrade autosteering. Automatically perform turns at the end of fields.

Seed in customized parcels, plots or zones within a field.

Related Features

TAP Pro
Automate the data workflow, with streamlined connection and fleet management.

XTEND
Extend the Horizon User Interface to virtually any modern iOS or Android mobile device.

Compatible Consoles

- XD
- XD+
- X25
- X35

Supported Application

- Seeding

Complementing proven and easy-to-use Topcon in-cab field Horizon Software, Plot Planter enables seeding in customized parcels within a field.
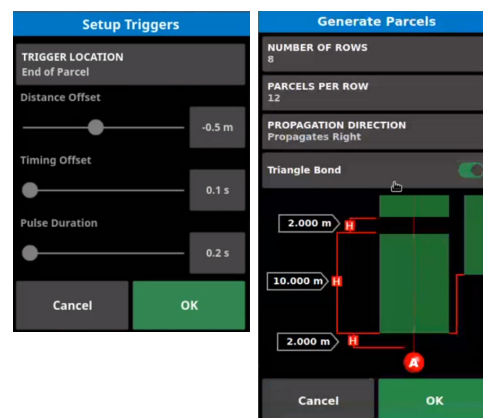

Easily create and import plots. Improve crop diversity by seeding single- or multi-product in ideal zones; even plant multi-hybrid without an advanced implement. Optimize plots and easily export for reporting purposes, such as insurance claims.

Horizon Software Plot Planter improves efficiency, diversity and profit-per-acre.

How it Works

Allows for in-Horizon-Software creation or 3rd party import. Parcels toggled on/off via task regions to apply in defined areas.
